

AS Capstone Project Proposal

Summer 2018

Project Name: Let go (Not the final Name)

Student Name: Dercio Torres

July 17, 2018

Project Description

I am proposing a web site that will help people find new homes for the stuff they don't want anymore. This web site will help the users maintain the streets cleaner instead of having for example, furniture in the streets to give it away.

My goal is to create something that will help users donate their stuff more easily to someone who needs it and don't have money to buy new, and by posting on the it will be in better shape than being outside getting ruined.

The users will have to register in order to have access to see what is out there. After they register they will be able to see anything that other users have posted on the website.

Functionality

Functionality of the site must include the following:

- Secure login for both users and administrators of the site.
- Users must have to register to be able to see what is out there
- Log when each user logs on. Log both successful and unsuccessful login attempts
- Users are going to be able to post anything they want to donate for example furniture.
- Users will be able to see the latest posts on top
- User will be able to Add and Edit their own posts
- The web site will have an admin side
- The admin will be able to Add/Edit/Delete/Search users
- The admin will be able to Add/Edit/Delete posts

Development Platform

This website will be coded in ASP.NET and I will be using the SQL Server to store all the users' information. My project will be a web based platform and it will have a User side and an Administrator side.
